

## Insights for SIG Talk: Quality and Testing - Proven Practices

Questions and Answers

April 17, 2018

Q: Does the sync happen in real time and could you set it up to sync manually?

A: You can set the polling interval so it can be real time or whatever works best for you. I'm not sure what you mean by a manual sync. Can you explain?

Q: Could you customize to sync updates to defects but only manually sync requirements?

A: You can sync different artifact types that you set up in Hub, Defects and Requirements.

Q: Android devices need to be placed flat on the surface , so we can change orientation while testing . How does this Triplite sync and charge work for you?

A:

Q: What is the threshold point (eg device count) when switching to Amazon device farm provides best value?

A:

Q: Have you had issues with the Samsung phone faceplate peeling from battery compartment, since the device is connected to Mobile Center and charging 24x7?

A:

Q: In my organization we only sync requirements on demand with approval, not every time the requirements are changed. For Defects, I would like it to sync in real time.

A: Yes, filter criteria can be specified in Hub on any fields you like to control when items sync.

Q: Very interesting, could we have another session on Amazon Device Farm, Network virtualization , Performance center etc.?

A:

Q: What is your recommendation of infrastructure (server machine requirements, OS, etc.) to have 20-30 devices? I mean, for the connector machine?

A:

Q: Will there be a recording posted?

A: Yes, you will receive an email in the next few days with the link to the on-demand webinar recording.
